CONE TOP RETRACTABLE BARRIER - RED/WHITE

- 9 Metre Length Red / White Fabric Stripes Tape
- Automatic Retractable
- Red/White stripes for high visibility
- Lightweight and can be fixed on top of traffic cone or with separate wall bracket

Cone-Top Retractable Belt Barriers are a type of crowd control system used to manage and direct the flow of traffic in locations with vehicles. They can be housed on top of a traffic cone.

The beauty of cone-mounted belt barriers is that they can be easily used with your existing standard traffic cones.

The retractable belt is typically made of durable fabric, which can be extended to 9 metres. Belts are connected to a spring-loaded mechanism inside the post or base, allowing them to be easily pulled out and retracted as needed. This can also be fixed on wall using a separate wall mount bracket.
