

Concrete Screw Bolt (14mm x 100mm)

FX-CSB-14x100

Description

The Concrete Screw Bolt (14mm x 100mm) is a strong and long-lasting building component. The helical threads on the concrete screw bolt anchors allow the bolt to cut its own thread in concrete and masonry when it is tightened. Since these anchors do not expand, no plugs are needed, making them perfect for use in concrete and masonry where cracking may be an issue.

The screw bolt also produces little expansion force, enabling applications close to edges and with small anchor spacing. Installation is simple and straightforward. One simply drills a hole and screws in the product.

Features

- Made of high tensile material.
- Helical thread to reduce installation torque.
- Can be used for both domestic and commercial applications.

Specifications

SKU	FX-CSB-14x100
Dimension	14mm x 100mm
Material	35K Carbon Steel
Colour	Grey
