

Concrete Screw Bolt (6mm x 60mm)

FX-CSB-6x60

Description

The Concrete Screw Bolt (6mm x 60mm) is a high tensile, self-tapping concrete and masonry bolt for usage in a variety of materials, including concrete, solid brick, hollow brick or stone surfaces. The product is a universal anchoring solution and may be used on both cracked and non-cracked concrete. They are also known as concrete anchors or concrete screw anchors.

They are designed to offer a firm and solid grip and to be swiftly and effectively placed even into difficult substrates. They may also be installed near a concretes edge without the possibility of distortion or deformation. The concrete screw bolt works through a mechanical interlock that holds the screws in place.

Features

- Made of high tensile material.
- Helical thread to reduce installation torque.
- Can be used for both domestic and commercial applications.

Specifications

SKU	FX-CSB-6x60
Dimension	6mm x 60mm
Material	35K Carbon Steel
Colour	Grey
