

PRODUCT SPECS

Product Code: TI-TT-12X6

Size: 1200x600mm

Finish: Thermoplastic - Polypropylene (White)

TACTILE TEMPLATE 1200X600

- Made to be tough and long-lasting
- Lightweight and easy to carry
- Used as a guide for installation of tactile indicators
- Easy to use, requires very little to no expertise in using

The Tactile Template-1200x600 is used for marking out individual tactile studs for installation onto pavement. The tactile template makes installation of tactile indicators easier and simpler by ensuring that tactile indicators are kept at the prescribed spacing. You will not need a measuring device and a builder's chalk when using this product. It is easy to cut to adjust to your specifications and site conditions. Installation of tactile indicators using the tactile template can be done in various indoor and outdoor retrofit projects like car parks, stairways, walkways, foot paths, pedestrian crossings, and ramps.

The Tactile Template-1200x600 is made of polypropylene. It is lightweight and flexible but resistant to heat which makes the tactile template a durable and long-lasting product.
